Topic 1: Organon of Medicine & Homoeopathic Philosophy

How to use this guide

- Topic 1 is one of ten core topics in the 25-mark core section, so expect about 2 to 3 questions.
- They ask an aphorism number, a date or edition, who wrote what, one of Kent's 12 observations, or a miasm feature.
- Each section ends with a memory hook; the recall card near the end holds the twenty facts asked most.

Syllabus heading (Advt 06/2026)	What it covers	Section
Fundamental principles and pioneers	Law of similars, simplex, minimum dose, vital force; Hahnemann, Kent, Stuart Close, H. A. Roberts	1.1
Aphoristic teachings	Health, disease, cure, indisposition, drug proving, the unprejudiced observer	1.2
Case taking and posology	Acute and chronic case taking, evaluation of symptoms, second prescription, Kent's 12 observations	1.3
Theory of chronic diseases and miasms	Evolution of chronic disease, fundamental cause, psora, sycosis, syphilis, tubercular diathesis	1.4

Standard books. Hahnemann, *Organon of Medicine*, 6th edition (Boericke's translation); Hahnemann, *The Chronic Diseases*; J. T. Kent, *Lectures on Homoeopathic Philosophy*; Stuart Close, *The Genius of Homoeopathy*; H. A. Roberts, *The Principles and Art of Cure by Homoeopathy*; J. H. Allen, *The Chronic Miasms*. Aphorism numbers follow the 6th edition unless a question says otherwise.

Memory hook: the Organon runs **mission → disease → medicine → application**. Place any aphorism in one of those four blocks first and its number becomes easy to recall.

1.1 Fundamental principles and pioneers

Homoeopathy rests on a few cardinal principles set out by Samuel Hahnemann in six editions of the Organon (1810 to 1842) and developed by Kent, Close and Roberts. Questions ask dates, edition details, aphorism numbers and who wrote which book.

Samuel Hahnemann: dates to know

Year	Event
10 April 1755	Born at Meissen, Saxony; 10 April is World Homoeopathy Day
1779	MD from Erlangen
1790	Cinchona bark experiment on himself while translating Cullen's *Materia Medica*
1796	*Essay on a New Principle for Ascertaining the Curative Powers of Drugs*, in Hufeland's Journal: the formal birth of homoeopathy
1805	*Medicine of Experience*; *Fragmenta de viribus medicamentorum positivis*, the first record of provings (27 drugs)
1810	First edition of the Organon
1811 to 1821	*Materia Medica Pura*, six volumes
1828	*The Chronic Diseases*
1835	Moves to Paris with his second wife, Melanie d'Hervilly
2 July 1843	Dies in Paris; buried at Pere Lachaise

From one experiment to the law of similars

How Cinchona bark started homoeopathy

Drug proving (§§21, 105–145): medicinal powers are learnt only by testing on healthy people.
Self-proving by a healthy, unprejudiced physician is best (§141).
1805: Fragmenta de viribus, the first record of provings (27 drugs).

From one experiment to a law · Cinchona 1790 → provings → similia similibus curentur

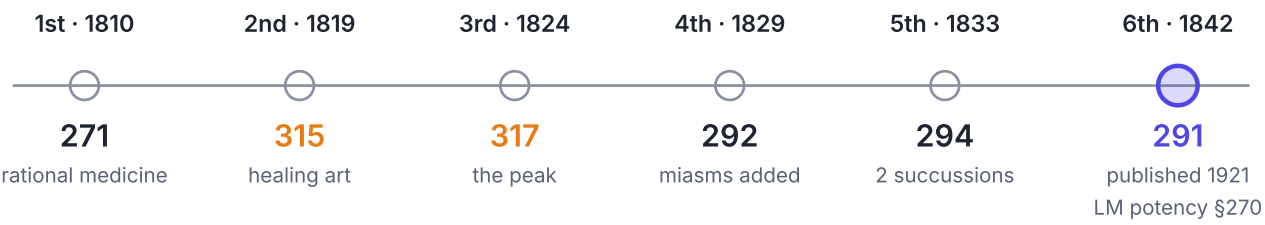

Hahnemann coined the word **allopathy**. His motto was *Aude sapere* (dare to be wise). The word *Organon* was first used by Aristotle.

The six editions of the Organon

Edition	Year	Title	Aphorisms
1st	1810	Organon der rationellen Heilkunde (Organon of Rational Medicine)	271
2nd	1819	Organon der Heilkunst (Organon of the Healing Art)	315
3rd	1824	Organon der Heilkunst	317
4th	1829	Organon der Heilkunst	292
5th	1833	Organon der Heilkunst	294
6th	written 1842, published 1921	Organon der Heilkunst; in English *Organon of Medicine*	291

Six editions: 271 aphorisms rising to 317, then falling to 291

Organon of Medicine, year of each edition and its number of aphorisms

6th edition: published by Richard Haehl, translated by William Boericke, introduction by James Krauss.

Organon editions · year and aphorism count

Read it left to right: the count climbs to 317 in the 3rd edition, then settles in the 290s.

- The 6th edition was published by **Richard Haehl** in 1921 and translated by **William Boericke** (1922); **James Krauss** wrote the introduction.
- The 6th edition introduced the **50 millesimal (LM) potency** (§270) and calls the vital principle the *dynamis*.
- The 4th edition (1829) first carried the theory of chronic diseases into the Organon.

Memory hook: aphorism counts **271 → 315, 317 → 292, 294, 291**: one start, two 'three-hundreds', then three 'two-nineties' falling to the last.

Cardinal principles

Principle	Meaning	Where
Law of similars (*similia similibus curentur*)	A medicine cures the disease whose symptoms it can produce in the healthy	§26 (law of nature), §§24 to 27
Individualisation	Each patient is treated by his own totality, not by the disease name	§§82 to 104
Totality of symptoms	The sum of all signs and symptoms is the only indication for the remedy	§§7, 18
Drug proving	Medicinal powers are learnt only by testing on healthy people	§§21, 105 to 145
Simplex (single remedy)	One single, simple medicine at a time	§§272 to 274
Minimum dose	The smallest dose that cures gently	§§275 to 283
Potentisation	Trituration and succussion develop the dynamic power	§§269 to 271

Principle	Meaning	Where
Vital force	Spirit-like force that keeps the organism in harmony; disease is its dynamic derangement	§§9 to 16
Chronic miasms	Chronic disease arises from psora, syphilis and sycosis	§§78 to 81

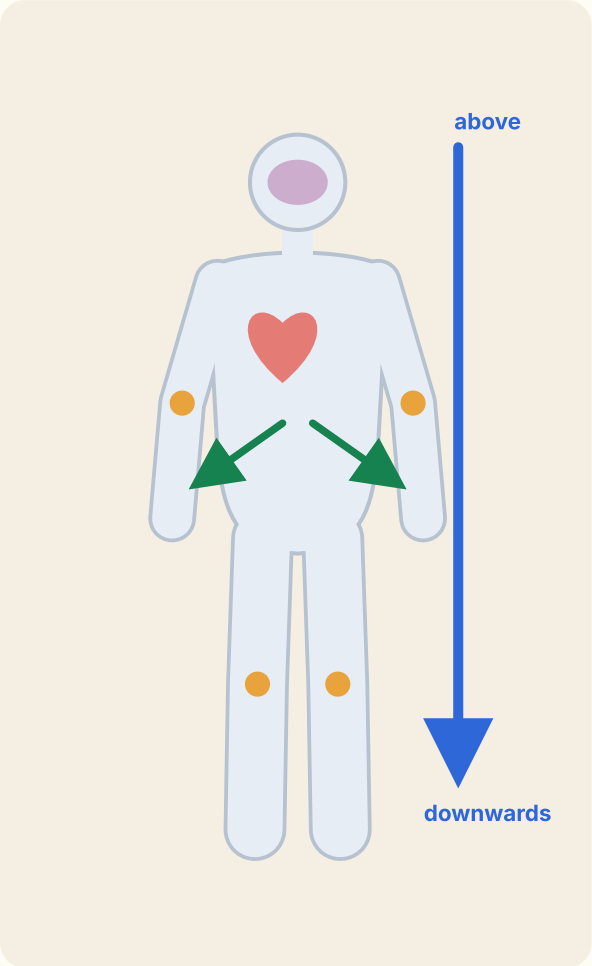

The **Arndt-Schulz law** is quoted in support of the minimum dose: weak stimuli excite vital activity, moderate ones favour it, strong ones retard it and very strong ones arrest it.

Later pioneers

Pioneer	Main work	Ideas examiners ask about
J. T. Kent (USA, 1849 to 1916)	*Lectures on Homoeopathic Philosophy* (1900); *Repertory* (1897); *Lectures on Materia Medica*	Mental and general symptoms first; potency series 30, 200, 1M, 10M, 50M, CM; 12 observations; second prescription; influenced by Swedenborg
Stuart Close (USA, 1860 to 1929)	*The Genius of Homoeopathy* (1924)	Susceptibility as the basis of cure and of dose; homoeopathy as a general therapeutic law
H. A. Roberts (USA, 1868 to 1950)	*The Principles and Art of Cure by Homoeopathy* (1936); *Sensations As If*	Vital energy and the direction of cure
Constantine Hering (1800 to 1880)	*Guiding Symptoms of our Materia Medica*	Hering's law: above downwards, within outwards, more to less important organs, reverse order of appearance
C. von Boenninghausen (1785 to 1864)	*Therapeutic Pocket Book* (1846)	The complete symptom: location, sensation, modality, concomitant

Hering's law: the direction of cure

Four arrows that tell you the case is healing

1 Above downwards

Symptoms clear from the head towards the feet

2 Within outwards

From the inner organs towards the skin

3 More to less important organs

Vital organs (heart, brain) clear before joints and skin

4 Reverse order of appearance

The newest symptoms go first, the oldest go last

Constantine Hering (1800–1880), author of the Guiding Symptoms. Use it to judge whether the cure is going the right way.

Hering's law · above downwards, within outwards, vital organs first, reverse order

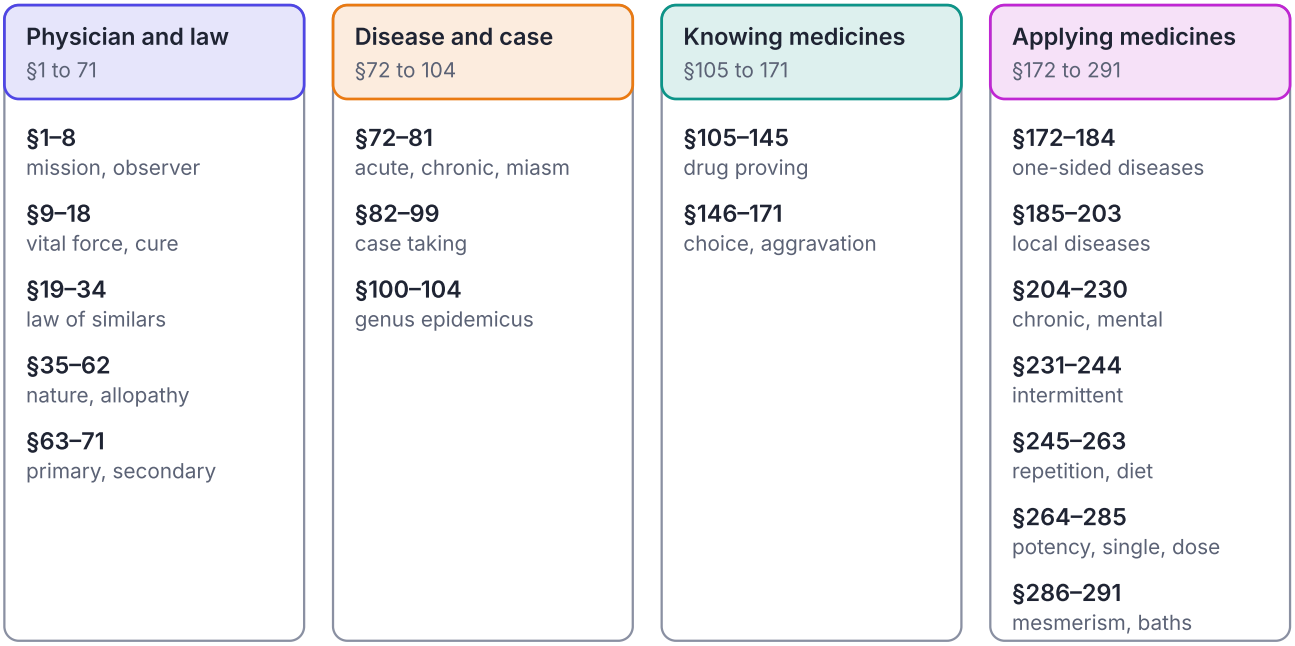

Memory hook: **K**ent = **K**ey symptoms of mind first; **C**lose = **C**apacity to react (susceptibility); **R**oberts = **R**oad of cure (direction).

1.2 Aphoristic teachings

The 291 aphorisms of the 6th edition follow one plan: the physician's mission, then disease, then medicines, then how medicines are applied. The map below places each block; the table after it holds the single aphorisms asked most.

The Organon in four blocks: law, disease, medicines, application

6th edition, 291 aphorisms; place the number in its block first

Map of the Organon · 4 blocks, 291 aphorisms

Any aphorism above 172 is about applying medicines; anything below 72 is about the physician and the law.

Key aphorisms

§	What it says
1	The physician's high and only mission is to restore the sick to health, to cure
2	Highest ideal of cure: rapid, gentle and permanent restoration of health, on easily understood principles
3	The physician must know the disease, the medicinal powers, how to apply them, and the obstacles to recovery
4	The physician is also a preserver of health
5	Aids to cure: exciting cause, fundamental cause (chronic miasm), constitution, character, occupation, habits, age, sexual function
6	The unprejudiced observer sees only the changes in body and mind: the signs and symptoms
7	The totality of symptoms is the outwardly reflected image of the inner disease and the only guide to the remedy
9	In health the spirit-like vital force rules the body with unbounded sway

§	What it says
11	In disease only the vital force is primarily deranged
16	The vital force is deranged, and cured, only by dynamic influences
17	Removing the totality of symptoms removes the disease: that is cure
21	Curative power of medicines is known only from changes they produce in the healthy
26	Law of nature: a weaker dynamic affection is extinguished by a stronger one similar to it
29	The remedy sets up a similar, slightly stronger artificial disease
33	The organism is more susceptible to medicines than to natural disease
63, 64	Primary action belongs to the medicine; secondary action (counteraction) belongs to the vital force
73	Acute diseases: individual, sporadic, epidemic, acute miasms
74	Drug diseases from allopathic treatment are the most incurable
77	Pseudo-chronic diseases from avoidable causes
78, 80	True chronic disease arises from a chronic miasm; psora is the oldest and mother of chronic disease
83, 84, 87	Case taking: freedom from prejudice; patient speaks first; no leading questions
100 to 102	Genus epidemicus
110	First rudiment of pure materia medica
127, 128	Prove on both sexes; prove in the 30th potency
141	Provings made by the healthy, unprejudiced physician on himself are the best
150	Indisposition: trivial complaint from an obvious cause; remove the cause
153	Choose by the striking, singular, uncommon and peculiar symptoms
157 to 160	Homoeopathic aggravation
172, 173	One-sided diseases
210	Mental diseases are bodily diseases with the mental symptom predominant

§	What it says
253	The earliest sign of improvement is in mood and mind
270	50 millesimal (LM) method
273	Never more than one single, simple medicine at a time

Memory hook: **6** eyes see (unprejudiced observer), **7** symptoms make the picture (totality), **26** is the law, **153** is the peculiar one, **273** is the single one.

The six concepts named in the syllabus

- **Health (§9):** the vital force keeps all parts in harmonious operation so the mind can use the body for the higher purposes of existence.
- **Disease (§§11 to 12):** a dynamic derangement of the vital force, shown outwardly only through signs and symptoms.
- **Cure (§§2, 17):** removal of the whole totality of symptoms, rapidly, gently and permanently. Kent separates cure from **recovery**, the return to health once a cause is removed.
- **Indisposition (§150):** a slight, passing complaint from an obvious cause such as a dietary error. Remove the cause; medicine is not needed.
- **Drug proving (§§105 to 145):** one pure drug at a time (§122), on healthy people of both sexes (§127), in the 30th potency (§128), with a controlled diet (§125), on reliable provers (§126). Many provers are needed for a complete picture (§135). In India these are now called homoeopathic pathogenetic trials and are run by the CCRH.
- **Unprejudiced observer (§6):** sees without theory or bias, noting only what the senses perceive; the first quality §83 asks of a case taker.

Memory hook: health is **harmony** (§9), disease is **derangement** (§11), cure is **removal of the totality** (§17), indisposition is **removal of the cause** (§150).

1.3 Case taking, evaluation, second prescription and posology

The exam asks how a case is taken, which symptoms rank highest, how to read the response to the first remedy (Kent's 12 observations) and how dose and repetition are decided.

Hahnemann's rules for case taking (§§83 to 104)

1. Bring freedom from prejudice, sound senses, attention in observing and fidelity in tracing the picture (§83).
2. Let the patient tell the story without interruption; then hear relatives and attendants (§84).
3. Write in the patient's own words, each symptom on a separate line, leaving space to add details.
4. Complete each symptom: where, what sensation, what makes it better or worse, what accompanies it.
5. Never ask a question that suggests the answer or can be answered with a bare yes or no (§87).
6. Add what the physician observes: appearance, behaviour, expression (§90).
7. In chronic cases ask about small complaints the patient no longer mentions (§95).
8. Acute cases are easier: the changes are recent and striking (§99).
9. In an epidemic, combine several patients' symptoms to find the genus epidemicus (§§100 to 102).

	Acute case	Chronic case
Focus	Recent change from the normal state	The whole life of the patient
Key questions	Cause, onset, modalities, concomitants, change in mood, thirst, temperature	Past illness, family history (miasm), appetite, thirst, desires and aversions, sleep, dreams, thermal reaction, menses, mental make-up
Remedy found from	The striking acute symptoms	The totality, mental and general symptoms first
Time	Short	Long; may need several sittings

Evaluation of symptoms (highest to lowest)

1. Strange, rare and peculiar symptoms (§153).
2. Mental generals, in Kent's order: will and emotions, then understanding, then memory.
3. Physical generals: heat and cold, appetite, thirst, desires and aversions, sleep, sweat, sexual and menstrual function.
4. Particulars: symptoms of one part, best when complete.
5. Common symptoms of the disease diagnosis: lowest value.

- A **general** symptom is said of 'I' (I am chilly); a **particular** of a part (my knee aches).
- Boenninghausen's **complete symptom** = location + sensation + modality + concomitant.
- Guernsey's **keynote** = one prominent feature pointing to a remedy.
- **Causation** ('ailments from' grief, a fall) ranks high when clear.

Memory hook: **S-M-P-P-C**: **S**trange first, then **M**ind, **P**hysical generals, **P**articulars, **C**ommon last.

Kent's 12 observations after the first prescription

#	What you see	What it means
1	Prolonged aggravation and final decline	Incurable; remedy too deep or potency too high for advanced organic disease
2	Long aggravation, then slow improvement	Marked structural change but still curable
3	Quick, short, strong aggravation, then rapid improvement	Good prognosis; no serious organic change
4	Cure without any aggravation	No organic disease; remedy and potency exactly right
5	Improvement first, aggravation afterwards	Remedy only superficially similar, or incurable
6	Relief that lasts too short a time	Structural change, or something interfering
7	Full relief of symptoms but no real relief of the patient	Incurable; the remedy only palliates
8	Some patients prove every remedy	Oversensitive, idiosyncratic patients
9	Action of medicines on provers	Healthy provers often left in better health
10	New symptoms appear	Many new symptoms suggest the wrong remedy
11	Old symptoms reappear	Curative: disease leaving in reverse order; wait
12	Symptoms take the wrong direction	Unfavourable; antidote the remedy

Kent's 12 observations: 3, 4 and 11 are good; 1, 7 and 12 are bad

What follows the first prescription, in four groups

Aggravation 1 to 4, worst to best	**1 · incurable** long aggravation, then decline	**2 · curable** long aggravation, slow recovery	**3 · best sign** short, sharp, then rapid recovery	**4 · just right** cure with no aggravation
Quality of relief 5 to 7	**5 · superficial** better first, worse later	**6 · obstacle** relief lasts too short	**7 · palliation** symptoms better, patient not	
Sensitive people 8 and 9	**8 · provers** prove every remedy given	**9 · provings** healthy provers end up better		
Which symptoms 10 to 12	**10 · new ones** new symptoms: wrong remedy	**11 · old return** curing in reverse order: wait	**12 · wrong way** outer to inner: antidote	

Green = good sign · red = bad sign · outlined = depends on the case

Kent's 12 observations · four groups, good and bad signs

Learn the colours first: the three green boxes and the three red ones answer most questions on this table.

Memory hook: 1 to 4 = aggravation (bad to best), **5 to 7 = quality of relief**, **8 to 9 = sensitive people**, **10 to 12 = which symptoms appear**. Old returning = good (11); wrong direction = antidote (12).

The second prescription (Kent)

- **Wait** while improvement continues; repeating too soon spoils the cure.
- **Repeat** the same remedy when improvement has stopped and the same symptoms return.
- **Antidote** when symptoms take the wrong direction or a violent, needless aggravation occurs.
- **Complementary** remedy when the first has done all it can and the picture has shifted to a related remedy.
- **Change** the remedy only when the totality has clearly changed or the first prescription was wrong.
- An **intercurrent** remedy (often a nosode) is given when reaction is deficient or a miasm blocks progress.

Posology

- **Minimum dose (§§275 to 279):** just enough for a gentle cure; too large a dose causes needless aggravation. The dose can hardly be too small (§279).
- **Potency choice:** greater susceptibility calls for higher potencies (Close). Mental and functional states and sensitive patients take higher potencies; advanced pathology, weak vitality and phlegmatic types take lower ones.
- **Kent's series:** 30, 200, 1M, 10M, 50M, CM, then DM and MM.
- **Repetition:** acute cases may need frequent doses. In the 5th edition a chronic case gets a single dose and the physician waits; the 6th edition allows repeated LM doses in water, succussed before each dose.
- **LM scale:** 1 in 50,000 per step, 100 succussions; one drop medicates 500 poppy-seed globules. The 5th edition used 2 succussions per potency.
- **Homoeopathic aggravation** is the primary action of a well-chosen remedy; a strong one means the dose was too large.
- **12C (24X)** is roughly where Avogadro's number is passed and no molecule of the original substance is likely to remain.

Memory hook: W-R-A-C-C: **W**ait, **R**epeat, **A**ntidote, **C**omplement, **C**hange: the five choices of the second prescription.

1.4 Chronic diseases and miasms

Hahnemann traced chronic disease to three infectious miasms (psora, syphilis and sycosis), with psora behind about seven-eighths of all chronic disease. Questions test how the theory developed and the features that separate the miasms.

How the theory developed

- Hahnemann saw chronic diseases treated homoeopathically keep returning in new forms. He studied the problem from about 1816, explained it to his pupils Stapf and Gross in 1827, and published *The Chronic Diseases* in 1828.
- **Acute miasms** run a course and end. Some, such as smallpox, measles and whooping cough, occur once in a lifetime and are **fixed miasms**. Kent divides an acute miasm into prodromal, progressive and declining periods.
- **Chronic miasms** never end on their own; the vital force cannot throw them off.
- **Three stages of infection:** the moment of infection; the whole organism becomes diseased internally; then the outward local sign (itch eruption, chancre or fig-wart), which quiets the internal disease.

- **Suppression** of the local sign drives the disease inwards to more vital organs; this is why Hahnemann opposed external applications.
- **Psora** (from suppressed itch) is the oldest, most universal and most destructive miasm, the 'mother' of chronic disease (§80). It can stay latent for years.
- **Pseudo-psora** is J. H. Allen's name for the tubercular diathesis, a mix of psora and syphilis.
- One-word keys (P. S. Ortega): psora = **deficiency**, sycosis = **excess**, syphilis = **destruction**.

Psora too little, sycosis too much, syphilis destroys

One picture per miasm, its key word, origin, aggravation and leading remedies

The four miasms at a glance · key word, origin, aggravation, remedies

Picture the gauge: psora is the near-empty one, sycosis overflows, syphilis is broken, and the tubercular arrows never settle.

The miasms compared

Feature	Psora	Sycosis	Syphilis	Tubercular
Key word	Deficiency, functional disorder	Excess, overgrowth	Destruction, ulceration	Change, wasting
Origin	Suppressed itch eruption	Gonorrhoea and fig-warts	Venereal chancre	Psora with syphilis
Mind	Anxious, fearful, quick but tires soon; lacks confidence	Secretive, suspicious, jealous, fixed ideas, hurried	Depressed, dull, morose, suicidal, destructive	Restless, changeable, discontented, longs to travel

Feature	Psora	Sycosis	Syphilis	Tubercular
Skin	Dry, rough, itching, burning	Warts, moles, thickening, oily	Ulcers, copper-coloured eruptions, deep fissures	Ringworm, eczema, easy bleeding
Discharges	Scanty	Thick, greenish-yellow, fishy	Thin, acrid, offensive, bloody	Profuse, offensive, blood-streaked
Worse	Cold, standing, suppression	Damp, cold, rainy weather	Night, sunset to sunrise	Before storms, closed rooms
Better	Natural discharges and eruptions	Unusual discharges, motion	Daytime	Open air
Leading remedies	Sulphur (king of antipsorics), Psorinum, Calcarea carb., Lycopodium	Thuja, Medorrhinum, Natrum sulph., Nitric acid	Mercurius, Syphilinum, Aurum met., Kali iod.	Tuberculinum, Bacillinum, Calcarea phos., Phosphorus

Memory hook: Psora = Poverty (too little), **Sycosis = Swelling** (too much), **Syphilis = Smashing** (destruction), **Tubercular = Travel** (restless change). Night aggravation means syphilis; damp weather means sycosis.

Rapid revision: one-line facts

Area	Fact
Hahnemann	Born 10 April 1755, Meissen; died 2 July 1843, Paris; Cinchona experiment 1790; Essay 1796
Organon	1810, 1819, 1824, 1829, 1833, 1842 (published 1921); 271, 315, 317, 292, 294, 291 aphorisms
6th edition	Published by Richard Haehl; translated by William Boericke; introduction by James Krauss; LM potency §270
First edition	Organon der rationellen Heilkunde (rational medicine); 'Heilkunst' from the 2nd
Aphorisms	§1 mission; §2 ideal cure; §3 knowledge; §4 preserver of health; §5 causes; §6 unprejudiced observer; §7 totality
Aphorisms	§9 health; §11 disease; §16 dynamic influences; §17 cure; §26 law of similars; §29 artificial disease; §33 susceptibility

Area	Fact
Aphorisms	§63 primary action (drug); §64 secondary action (vital force); §74 drug diseases most incurable; §80 psora
Aphorisms	§§84, 87 own words, no leading questions; §§100 to 102 genus epidemicus; §128 prove in 30th; §141 self-proving best
Aphorisms	§150 indisposition; §153 peculiar symptoms; §173 one-sided; §210 mental disease; §253 mood improves first; §273 single remedy
Pioneers	Close = Genius of Homoeopathy (susceptibility); Roberts = Principles and Art of Cure; Kent = Lectures on Philosophy
Hering's law	Above downwards, within outwards, more to less important organs, reverse order of appearance
Kent's observations	3 = best prognosis; 4 = no organic disease; 11 = old symptoms return (good); 12 = wrong direction (antidote)
Posology	Kent's series 30, 200, 1M, 10M, 50M, CM; LM 1:50,000, 100 succussions, 500 globules per drop
Miasms	Psora deficiency, sycosis excess, syphilis destruction; pseudo-psora = tubercular (J. H. Allen)
Remedies	Sulphur king of antipsorics; Thuja and Medorrhinum for sycosis; Mercurius and Syphilinum for syphilis
Traps	Primary action belongs to the drug; recovery is not cure; an indisposition needs no medicine

Memory hook: read this table aloud twice the evening before the exam; say each aphorism number before you read its meaning.

One-glance recall card

Use it as a self-test: cover the small lines and say each fact from its cue.

Topic 1 recall card: the 15 facts asked most

Cover the small lines, say the fact from the big cue, then check

291 aphorisms 6th edition, written 1842, published 1921 by Haehl	**271 → 291** counts: 271, 315, 317, 292, 294, 291 (1810 to 1842)	**§6 · §7** unprejudiced observer; totality is the only guide
§9 · §11 · §17 health = harmony; disease = derangement; cure = removal	**§26** law of similars stated as a law of nature	**§63 · §64** primary action = drug; secondary action = vital force
§128 · §141 prove in the 30th potency; self-proving is best	**§150** indisposition: remove the cause, no medicine needed	**§153** strange, rare, peculiar symptoms choose the remedy
§270 · §273 LM potency (1:50,000); one single remedy at a time	**Kent 3 · 4 · 11** good signs: short sharp agg, no agg, old symptoms return	**Kent 1 · 7 · 12** bad signs: decline, palliation, wrong direction (antidote)
Hering's law above down, within out, vital to less vital, reverse order	**Close · Roberts** Genius of Homoeopathy (1924); Principles and Art of Cure (1936)	**P · Sy · Syph** deficiency, excess, destruction; pseudo-psora = TB

Topic 1 recall card · 15 facts

Practice MCQs

Twenty questions grouped by syllabus heading; the answer key follows.

Fundamental principles and pioneers

1. The 6th edition of the Organon contains: (a) 271 aphorisms (b) 294 aphorisms (c) 291 aphorisms (d) 317 aphorisms
2. The first edition of the Organon (1810) was titled: (a) Organon der Heilkunst (b) Organon der rationellen Heilkunde (c) Organon of Medicine (d) Materia Medica Pura
3. The 50 millesimal potency is described in: (a) §128 (b) §153 (c) §270 (d) §273
4. 'The Genius of Homoeopathy' was written by: (a) J. T. Kent (b) H. A. Roberts (c) Stuart Close (d) C. Hering
5. The law of similars is stated as a law of nature in: (a) §6 (b) §26 (c) §63 (d) §150

Aphoristic teachings

6. The unprejudiced observer is described in: (a) §6 (b) §9 (c) §83 (d) §153
7. A trivial complaint from an obvious cause that needs no medicine is called: (a) a one-sided disease (b) an indisposition (c) a pseudo-chronic disease (d) a fixed miasm
8. Hahnemann advised proving medicines in the: (a) mother tincture (b) 6th potency (c) 30th potency (d) 200th potency
9. Secondary action (counteraction) belongs to: (a) the medicine (b) the vital force (c) the miasm (d) the physician
10. According to §253, the earliest sign of improvement appears in the: (a) skin (b) appetite (c) mood and mind (d) sleep

Case taking and posology

11. Asking questions that suggest the answer is forbidden in: (a) §84 (b) §87 (c) §100 (d) §141
12. In Kent's 12 observations, a quick, short, strong aggravation followed by rapid improvement means: (a) incurable case (b) good prognosis (c) wrong remedy (d) palliation only
13. When symptoms take the wrong direction after a remedy, Kent advises to: (a) wait (b) repeat (c) antidote (d) raise the potency
14. The highest-ranking symptoms in evaluation are: (a) common symptoms (b) particulars (c) strange, rare and peculiar symptoms (d) pathological symptoms
15. In the LM scale, the drug-to-vehicle ratio at each step is: (a) 1:10 (b) 1:100 (c) 1:1000 (d) 1:50,000

Chronic diseases and miasms

16. Hahnemann published 'The Chronic Diseases' in: (a) 1810 (b) 1821 (c) 1828 (d) 1835
17. The miasm marked by excess and overgrowth is: (a) psora (b) sycosis (c) syphilis (d) tubercular
